Install and Upgrade

**Important** The inSync On-Premise 5.9.6 documentation is applicable for the On-Premise v5.9.7 patch and v5.9.8 patch release as well.

- **Set up inSync Master**
  - Prerequisites to install inSync Master
  - Install inSync Master on Windows
  - Install inSync Master on Linux
  - Log on to inSync Master Management Console
  - Activate your inSync Setup
  - Configure inSync Master using the Configuration wizard
  - Configure password policy for users and administrators

- **Create additional inSync Storage Nodes**
  - Prerequisites to install inSync Storage Node
  - Create an inSync Storage Node on Windows
  - Create an inSync Storage Node on Linux

When inSync backs up data, it first connects to the inSync Master. The inSync Master redirects inSync to the appropriate inSync Storage Node. inSync then sends the data to the inSync Storage Node which in turn places it in the right storage. An inSync Storage Node is a server to which storage are connected. A collection inSync Storage Node is known as private cloud.
• Create additional storage
No image available

A storage contains the data that inSync backs up from user devices. A storage is created on an inSync Storage Node. You can have multiple storage on an inSync Storage Node.

◦ About storage
◦ Create a file store
◦ About storage pools
◦ Create storage pools
◦ Ensure High Availability of a storage

• Create other administrators
