Druva Cloud Platform

The Druva Cloud Platform provides a unified interface from where you can protect and manage the entire data footprint of your organization on servers, endpoints, and cloud applications such as Microsoft 365. In addition, you can subscribe to new services, review your service utilization, check the cloud status, and access support and learning resources from the new console.

- **Release Details**
  - No image available

  This article provides information about release details on the Druva Cloud Platform.
  - Release Notes
