How to retrieve metadata attributes of Google Workspace?

Overview

inSync collects all the metadata attributes of Google Drive files and folders. If you want to retrieve additional metadata attributes, you need to configure a few settings in your WebDAV client.

Procedure

To retrieve the Google Drive attributes, specify either of the following settings in your WebDAV client:

- properties = [getgdriveproperties]
- include = [getgdriveproperties]

Once configured, inSync collects and retrieves all the Google Drive metadata attributes. Click here to see the entire list of metadata attributes that are retrieved.
